WELEARN · GROWTH HUB

Dashboard review pack

Real screenshots of the Student, Parent and Coach dashboards, for team feedback and refinement.

- **Students**: 9 screens
- **Parents**: 5 screens
- **Coaches**: 15 screens

Captured 11 October 2026

Build branch `codex/fix-dashboard-image-uploads` (commit 0b6300f plus uncommitted work), local dev server

Data Local emulator review accounts and mock test data. Names and figures are made up.

Viewport Desktop, 1440 px wide. Long pages are split into numbered parts.

How to give feedback: each page has a feedback box. Note the page number with your comment, or annotate the PDF directly.

BEFORE YOU START

Things noticed while capturing

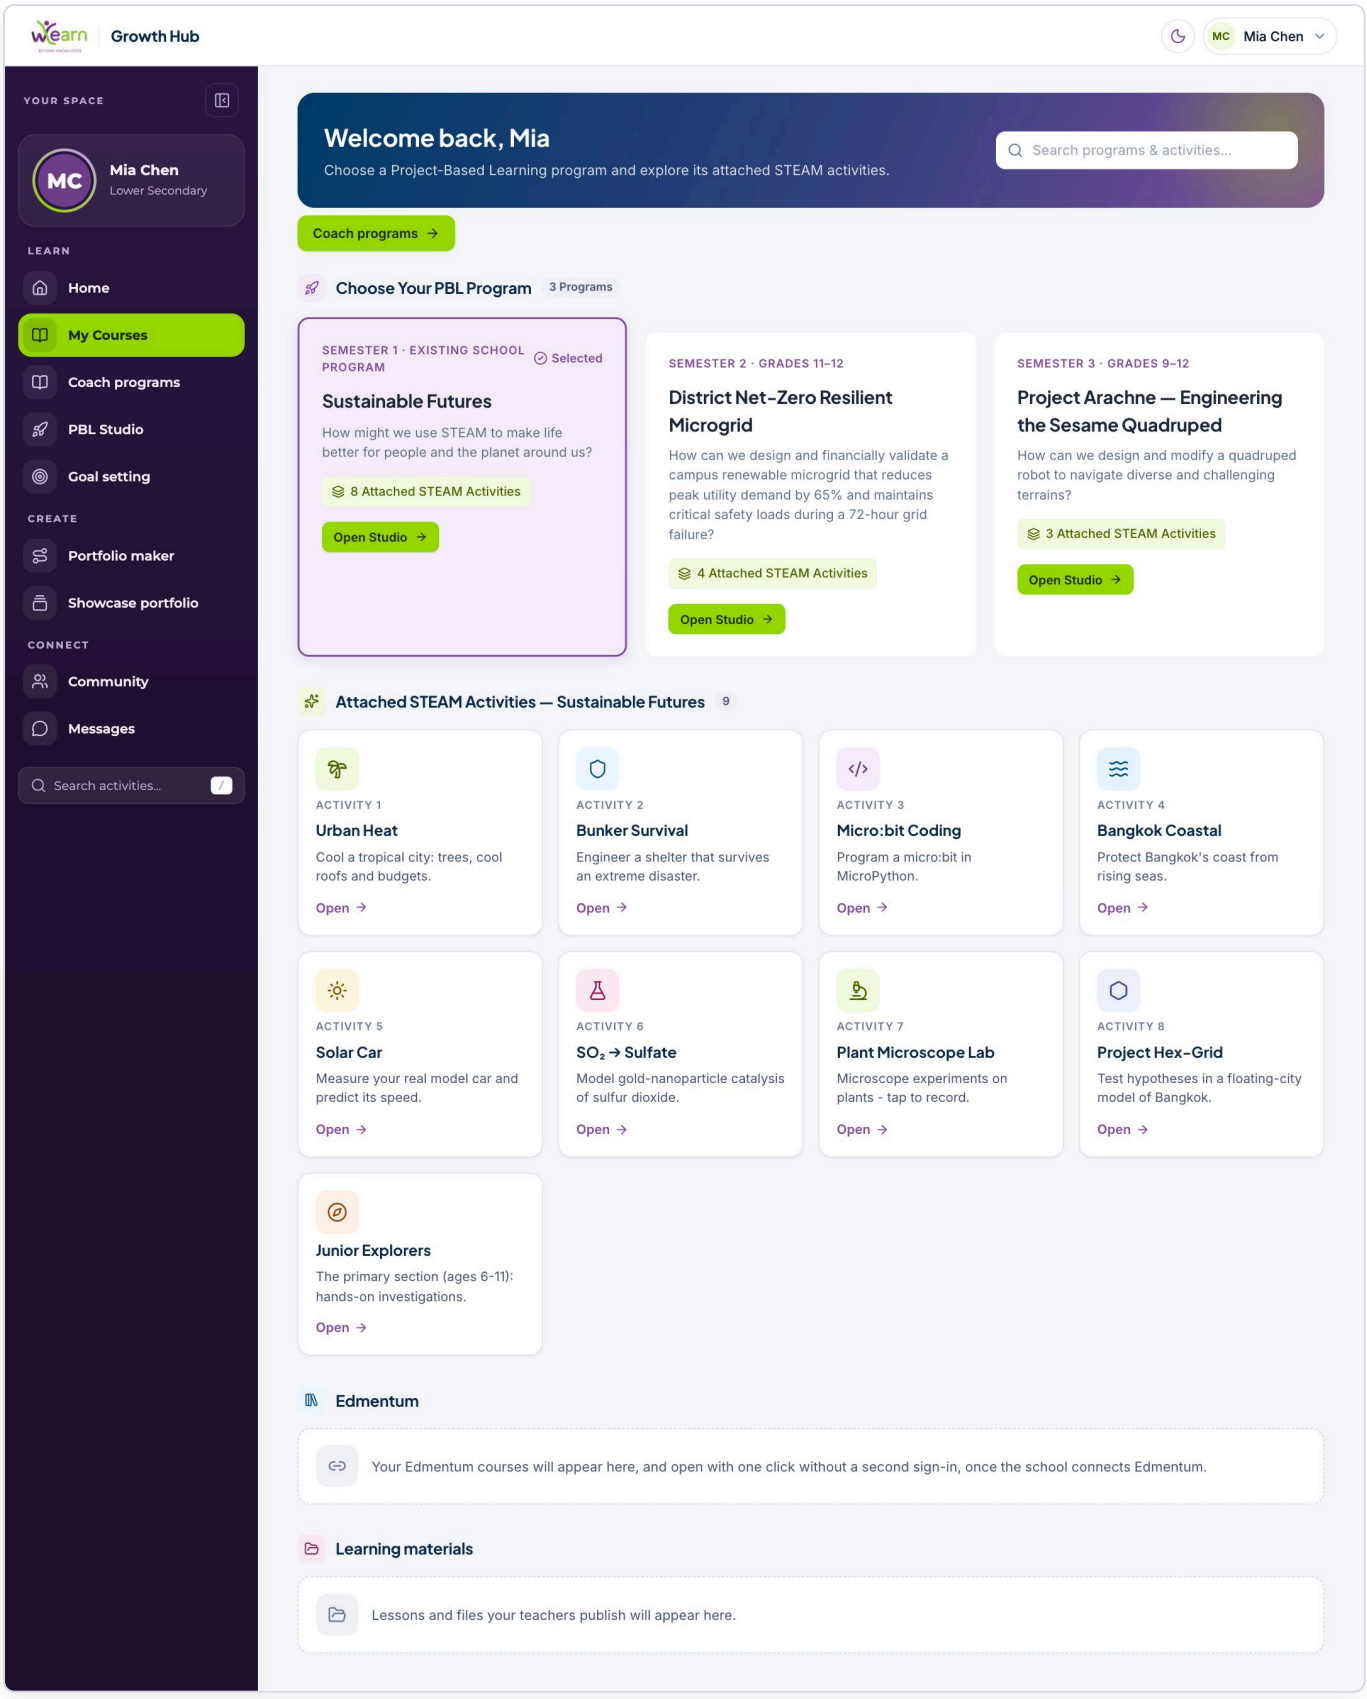

Seen directly during the screenshot run. A starting point for discussion, not a full audit.

AREA	OBSERVATION
Coach	Management tools opens on an empty screen. The dashboard content starts one full screen-height below the header, so nothing is visible until the coach scrolls.
Coach	Management tools uses a dark, emoji-heavy legacy style that does not match the light Growth Hub shell around it.
Coach	Management tools lists Mia Chen twice in the learner cards.
Coach	Opening Primary resources hides the left sidebar, so Community and Messages cannot be reached from that page without going back to the start.
Student	A "New badge" celebration pop-up covers the Home page straight after sign-in.
Student	The Goal setting modal stays open over other pages (Portfolio maker, Showcase portfolio, Community, Messages) after navigating away, until it is closed by hand.
Parent	The "My children" card shows only Hao Bennett, while the School learning workspace below selects Mia Chen. The two sections appear to read different link sources.
Parent	Before a child is linked, the parent home is mostly an empty state plus the invite-code form.

not whether a line was typed by hand.

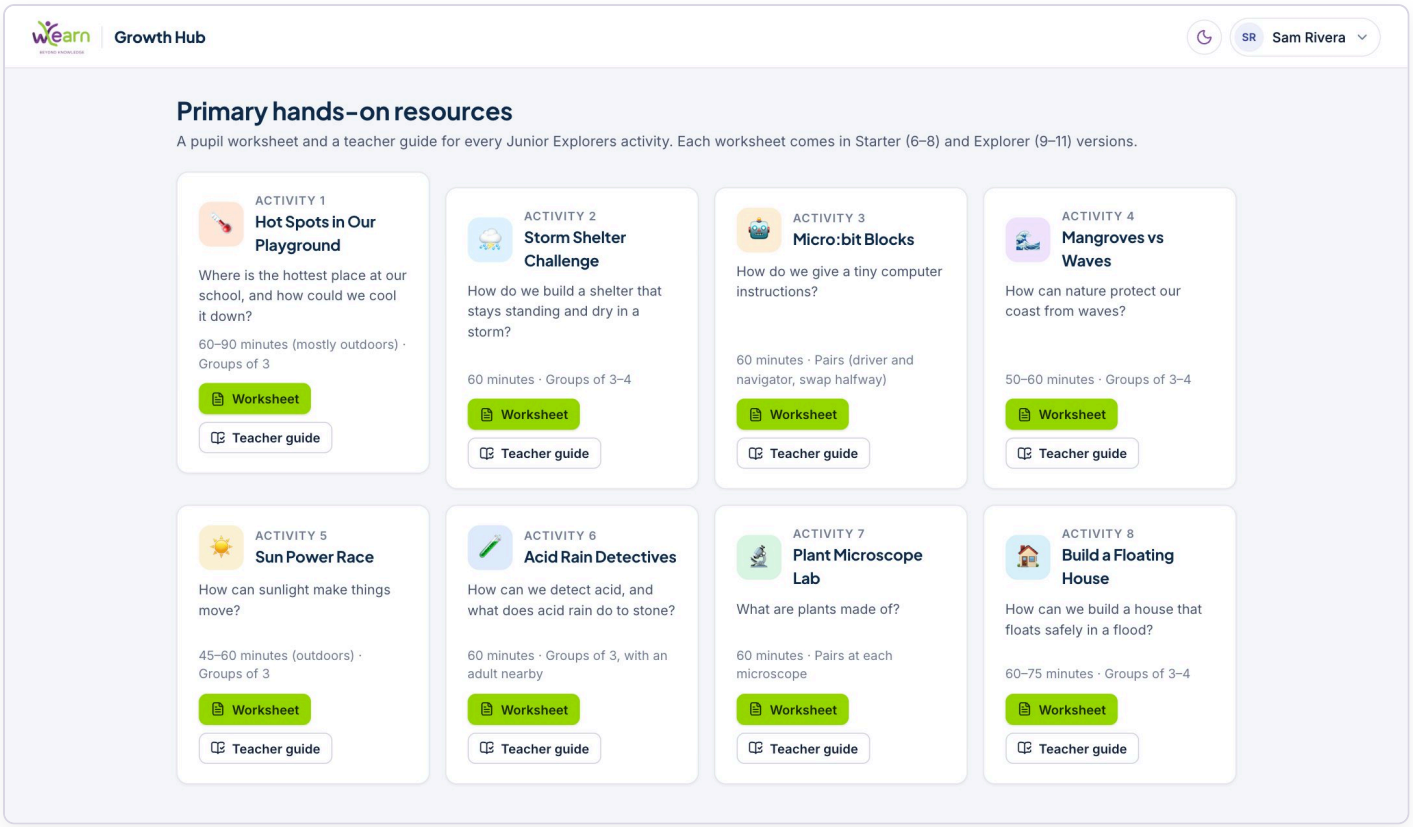

The term at a glance

Weeks	Phase	What learners do	Assessed against
1–3	Explore STEAM activities	Build the science, maths and making skills the theme needs, and notice what interests you.	NGSS three-dimensional rubrics (per activity)
3–4	Empathise Find a real problem	Start from something you are interested in and find the people it affects. Listen before you design.	Empathetic Listening, Social Awareness, Inquiry & Research Skills, Social Responsibility
4–5	Define Say exactly what you will solve	Turn what you learned into one clear problem statement and decide how you will know you succeeded.	Problem Identification, Synthesis of Information, Goal Setting, Message Clarity & Precision
5–6	Ideate and plan Many ideas, one plan	Generate lots of ideas, pick the strongest with reasons, then plan the build with AI as your co-pilot.	Ideation, Novel Ideation, Planning and organization, Project Management, Strategic Project Execution
6–9	Prototype Build and program it	Build a working version and program it. The AI co-pilot writes code with you - you test it, change it, and make sure you understand every line.	Engineering Design, Technological Creativity, Computational Thinking, Problem Solving Strategies, Self Management, Team Commitment and Responsibility
9–11	Test and improve Prove it works	Test against your success criteria with real data and real users, then improve it.	Data Interpretation, Analysis and Evaluation, Collaborative Feedback Practices, Reflection and Iteration, Resilience and Perseverance
11–12	Showcase or present Tell the story	Show what you made and the journey behind it, backed by your evidence.	Public Speaking, Visual Communication Design, Storytelling for Impact, Verbal and Nonverbal Communication, Reflection and Self-assessment, Meta-Cognitive Reflection

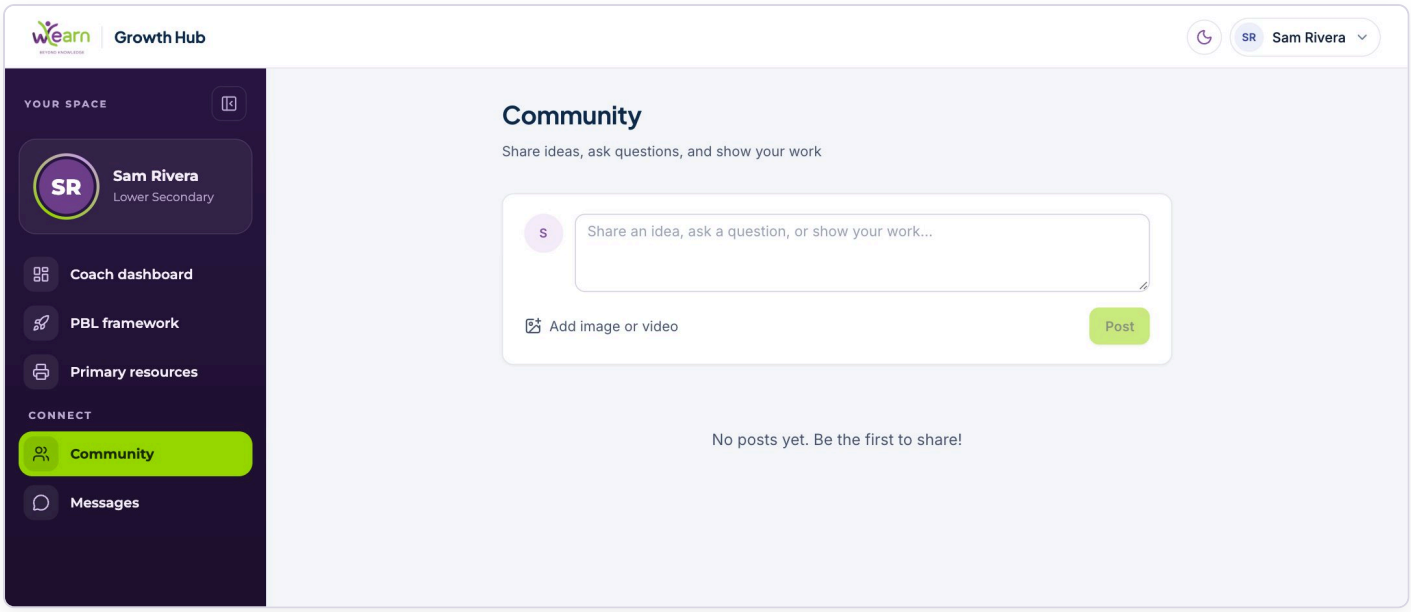

Learning with AI

- **You are the designer, AI is your co-pilot.** Use AI to plan, research, write and fix code, and practise your talk. The decisions and the ideas are yours.
- **Understand every line.** AI can write your code. Run it on the real device, test it, change it, and be ready to explain what each part does. Code you cannot explain is not finished.
- **Aim it at a real need.** Use AI to help people or the environment. Every project names who or what benefits, and measures whether it worked.
- **Log it.** Add an AI log entry when AI helped: what you asked, what it gave you, and what you kept, changed or rejected. Good AI use is evidence, not cheating.
- **Check it.** AI can be confidently wrong. Check facts against a second source and test claims with your own data.
- **Keep private things private.** Never put names, photos, addresses or anything personal about you or the people you interview into an AI.
